RECASENS
BCN 1886

About us

RECASENS is a family company founded in 1886 in Barcelona, internationally renowned for its innovation, development and manufacture of technical fabrics for different sectors such as sun protection, textile architecture, transport, nautical and outdoor furniture.

We offer a wide range of customized fabrics for all the markets we serve, made out of three primary product lines:

1

Solution dyed Acrylic fabrics for sun protection, marine and decorative applications.

2

PVC coated high tenacity Polyester fabrics for sun protection, textile architecture, and transport and industrial applications.

3

Mesh screen fabrics, made out of PVC coated high tenacity Polyester yarns for sun protection, decorative interior and exterior blinds

RECASENS has the full control of all production processes thanks to its vertical manufacturing capabilities.

The company has two facilities, one of them is dedicated to spinning acrylic fiber yarn and high tenacity polyester screen yarn a second plant is dedicated to weaving and finishing. Both plants are equipped with state-of-the-art machinery.

RECASENS has been manufacturing its wide range of products for more than 130 years following market trends driven by architects, designers and decorators.

In addition, **RECASENS** is synonymous for innovation and dedicates a large part of its resources to R & D with the aim to offer the best textile solutions for the different sectors it serves.

Recacril® fabrics, your best bet

Recacril® fabrics solve the most demanding solar control needs with a broad offering of stylish solids and stripes.

Recacril® high performance fabrics, made out of 100% solution dyed acrylic fiber, providing a breathable yet tightly woven fabric that allows heat and moist air to pass through, while blocking the sun and rain. This rare combination of breathability and protection from the elements will protect your skin from the damaging effects of the sun, keep you comfortable, and even save energy when used as a window or patio awning.

Our Spanish heritage, and European influence leads to a diverse collection of vibrant to neutral solids, and inspired stripes that lets you set the mood for your outdoor space.

Not convinced yet, let us tell you more about some additional benefits:

Color fastness

The high quality solution dyed acrylic fiber of which **Recacril®** is made out of, has been used successfully in the industry for over 50 years.

The fiber is produced through a special spinning, process in which the pigments are injected into the polymer before being extruded into the fiber.

The result of this unique manufacturing process is a fiber with exceptional color retention, great mechanical properties, and excellent resistance to wear and the weather elements.

Advanced Protection Infinity

Recacril® fabrics are treated with the Infinity process, a treatment technology designed to ensure the long-lasting benefits. In this process, nano-particles in the finishing formula completely covers the surface of the fabric, forming an invisible and permanent coating. After applying the **Infinity process**, the surface and the inside of the fabric remain protected against the accumulation of dirt, dust and other contaminates.

Low reactivity and high stability of the Infinity process provides the fabric with an advanced and durable protection, especially against mold and mildew. In addition, the **Infinity Process** yields excellent water and oil repellence.

No shrinkage or deformation

Recacril® fabrics are currently the best when it comes to dimensional stability. **REAcacril®** maintains its original dimensions under significant changes in temperature and humidity, avoiding shrinkage or elongation. Internal testing proves that dimensional stability is two times better than other similar acrylic fabrics in the market.

Superior solar protection

Recacril® is the best fabric option for protection from the sun. Its tight weave together with the quality of its fibers blocks up to 90% of harmful sun rays, reducing heat and glare.

Our fabrics comply strictly with the UV Standard 801, a method of analysis to determine the UPF (Ultraviolet Protection Factor).

When it comes to awnings, the fabric strength, aging under sun, rain, humidity and other weather conditions, reduces the capacity of the fabric to UV Protection.

Consequently these factors should be taken into account when fabric is tested to give a reliable UPF factor to avoid any risks for end-users.

Ecological products

Recacril® fabrics are certified with the Oeko-Tex Standard 100 seal, a certification which indicates that none of our fabrics contain carcinogenic substances or volatile components and do not represent any danger to human beings or the environment.

Cleaning and maintainance

The accumulation of dirt and other unwanted substances on the fabric could damage the finish and cause accelerated deterioration of the fabric.

Recacril® fabrics are very easy to maintain, by removing most of the dirt and dust with a soft brush, rinsing with water, and allowing the fabric to air-dry.

Certified Quality System

All **RECASENS** fabrics are manufactures under the criteria and requirements of the ISO 9001 quality management system.

Over the last 130 years, **RECASENS** has built a solid reputation as a world market leader in textile innovation.

Made to last

The use of high quality raw materials in combination with the most demanding manufacturing processes confer to our **RECASENS** fabrics unbeatable benefits of color fastness and resistance. In addition, **Recacril®** fabrics are recognized for their high mechanical resistance to abrasion, traction, tear, mold and mildew.

The combination of these features ensures **RECASENS** fabrics keep their strength, color, and beauty for many years, which supports our 5 year warranty.

Applications

Patio enclosures

Drop curtain awning

Parasols

Pergolas

Dutch canopy

Stationary awnings

Drop arm awnings

Terrace awnings

Awnings

Balcony awning

Roll up curtain

Recreational vehicles

Consumer information

Recacril® fabrics are high-performance fabrics made out of a solution dyed acrylic fiber. The Infinity finish provides the fabric an exceptional water and dirt repellent performance, resulting in a durable fabric that maintains its appearance throughout its life. However, during installation of the awning some imperfections may occur. These small irregularities such as wrinkles, folds, crazing and veining are inherent in the nature of acrylic fiber and have no effect on the performance or qualities of the fabric. Therefore, it is neither the fabric manufacturer's nor installer's fault, and replacement is not necessary.

Subsequent to handling, small white traces may appear on acrylic fabrics treated with resins containing fluoride. Crazing and Veining are particularly visible on light-colored fabrics when inspected against the light. These traces will dissipate over time.

When rolling the fabric, folds may occur in the center or along the stitching.

Maintenance of Recacril® canvas

The high-tech finish of the Infinity process gives **Recacril®** fabric a lasting protection against fungi and excellent water and oil repellency, protecting you from both the sun and water for many years.

However, dust accumulation, particles of air pollution, foreign organic matter and dirt in general, can damage this protection, shortening the life of the fabric and therefore must be eliminated.

The most effective method of maintenance is to clean the fabric once a month with a hose with light pressure, this prevents accumulation and penetration of dirt in the fabric.

It is very important that after cleaning with water let the canvas completely dry before rolling up the awning.

In case of rain, the awning can be left extended, since the rain helps rinse away the dirt. If for any reason the wet awning must be rolled up, unroll it as soon as possible and let it dry completely.

In times of continuous rains and strong weather it is advisable to keep the awnings rolled up.

If this periodic cleaning with water is performed, in most environments, it will only be necessary to do a more deep cleaning process every 2 or 3 years.

If you need additional instructions or help, do not hesitate to contact us at info@recasens.com and we will gladly advise you.

Recacril® Warranty

RECASENS guarantees the **Recacril®** canvas for a period of 5 years from the date of installation.

The guarantee covers the abnormal deterioration, decay and loss of color of **Recacril®** subjected to normal atmospheric conditions and when correct maintenance has been systematically carried out.

Within the period, **RECASENS** will replace free of charge the defective yardage or pay its cost.

The guarantee covers only the value of the canvas and specifically excludes any other elements of the awning (hardware, mechanisms, etc.), as well as the costs of producing and installing the awning.

The warranty does not cover any deterioration due to abuse, negligence, vandalism, burns of any kind, fires and natural disasters.

In particular:

- The lack of maintenance of the canvas during its use in products or instruments. In particular, NEVER use solvents or hard brushes or other scraping instruments that can damage the protective finish of the canvas.
- Atmospheric pollution or plant herbicides.
- Animal waste.
- Mounting defects or misuse by the user.
- Placing objects on top of the canvas, or falling objects on it.
- Unusual atmospheric conditions (lightning, storms, etc.).

In order to process the guarantee, it is necessary to contact the installer or distributor from whom you purchased the product. The installer or distributor shall forward the claim to **RECASENS**.

Replacement or refund of defective fabric does not imply the extension of the warranty of the replacement fabric.

Recacril® Proof es un tejido de fibra acrílica tintada en masa con una cara recubierta de PVC, lo que lo hace absolutamente impermeable, combinando la elegancia del tejido acrílico con las prestaciones de impermeabilidad del PVC, todo ello con un acabado de calidad textil.

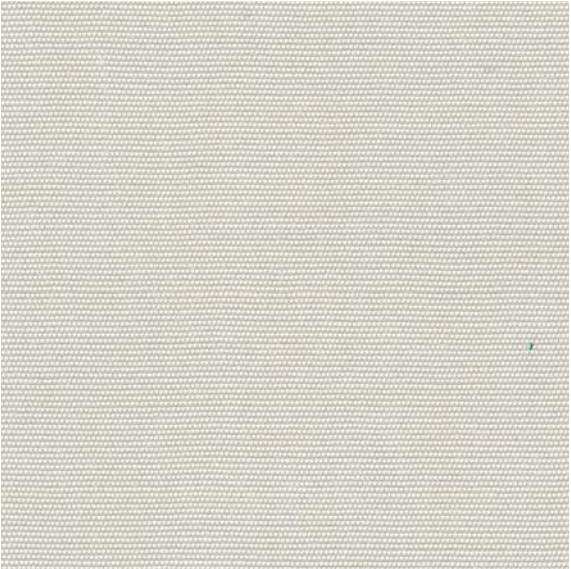

La cara de PVC cuenta con un acabado especial que lo hace resistente a la suciedad y le proporciona un aspecto decorativo y visual muy agradable.

Además el acabado opaco está especialmente diseñado para proteger de la luz, proporcionando el máximo confort.

Recacril® Proof is made out of solution dyed acrylic fiber with a PVC back coating which makes the fabric completely waterproof, combining the elegance of an acrylic fabric with the PVC waterproof performance.

In addition, the PVC back coating includes a Blockout finishing, providing thermal and visual comfort and maximal protection from the sunlight.

🕒 *Disponible en 4 colores / Available in 4 selected colors.

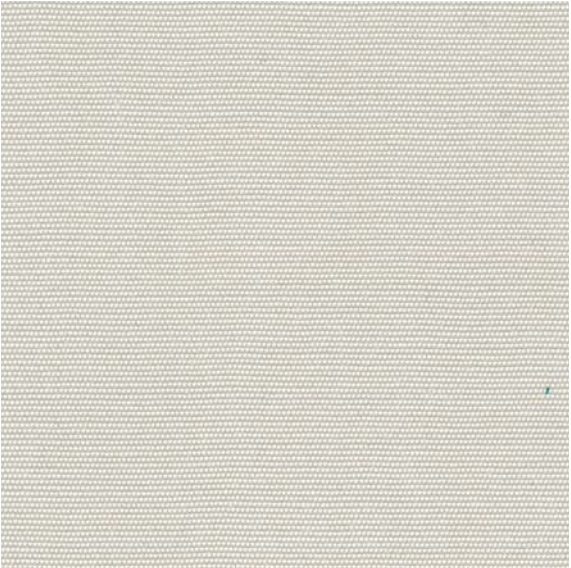

Recacril® Dry es un tejido de fibra acrílica tintada en masa con una cara recubierta de PVC, lo que lo hace absolutamente impermeable, combinando la elegancia del tejido acrílico con las prestaciones de impermeabilidad del PVC, todo ello con un acabado de calidad textil.

La cara de PVC cuenta con un acabado especial que lo hace resistente a la suciedad y le proporciona un aspecto decorativo y visual muy agradable.

Recacril® Dry is made out of solution dyed acrylic fiber with a PVC back coating which makes the fabric completely waterproof, combining the elegance of an acrylic fabric with the PVC waterproof performance.

The PVC backside has a special finish that makes it resistant to dirt and dust, easy to clean and providing a very pleasant decorative and visual appearance.

🕒 *Disponible en 4 colores / Available in 4 selected colors.

Recacril® System es un tejido diseñado para conseguir una elevada impermeabilidad, dando columnas de agua de más de 1000 mm.

La especial formulación del recubrimiento y un estudiado proceso de aplicación, hace que las lonas **Recacril® System** tengan una excepcional resistencia al marcado de las arrugas que inevitablemente se producen durante el proceso de confección. Además, a diferencia de otros artículos del mercado, la cara recubierta de las lonas **Recacril® System** no brilla ni tiene un aspecto blanquecino.

The Recacril® System fabric are designed to achieve high impermeability, with water column over 1000 mm.

The special coating formulation and the implementation process studied, provides Recacril® System fabric with an exceptional resistance to wrinkles that inevitably occur during the manufacturing process. Moreover, unlike other articles of the market, the coated side of the Recacril® System fabrics do not shine nor has a whitish appearance.

🕒 *Disponible en 35 colores / Available in 35 selected colors.

Garantía

La alta calidad de las materias primas empleadas y los rigurosos procedimientos de control de calidad a los que están sometidas las lonas de **RECASENS** durante todo el proceso de producción, nos permiten ofrecer una garantía de 5 años en todos los productos de fibra acrílica teñida en masa.

Esta garantía cubre el deterioro de la lona, putrefacción, hongos y pérdida del color de la misma en condiciones atmosféricas normales. Esta garantía no cubre ningún deterioro debido a abusos, negligencia, vandalismo, perforaciones, quemaduras y desastres naturales. Asimismo, no cubre el desgaste normal, ensuciamiento y manchas procedentes de la contaminación atmosférica y las condiciones del entorno.

El producto debe estar correctamente instalado y sometido a un mantenimiento adecuado. La garantía, en caso de aplicación, no cubre los costes de montaje y fabricación.

Proceso Infinity

Las lonas **Recacril®** están tratadas según un proceso de alta tecnología para asegurar la calidad duradera de los tejidos. En este proceso, nanopartículas de los productos de acabado recubren completamente la superficie de las fibras del tejido, formando un revestimiento permanente. Tras el tratamiento, la superficie y el interior del tejido quedan permanentemente protegidos frente a la acumulación de la suciedad y a los efectos adversos de una amplia variedad de agentes atmosféricos.

La baja reactividad y elevada estabilidad del **Proceso Infinity** confieren al toldo una protección duradera, especialmente frente a los hongos, y proporciona una excelente repelencia al agua y al aceite, haciendo que los toldos les protejan tanto del sol como del agua.

Warranty

Because **S.A. RECASENS'** fabrics are manufactured with only the highest-quality raw materials and the most rigorous quality-assurance procedures, we offer a 5-year warranty on our 100% solution dyed acrylic products

The warranty protects against the loss of characteristics, rot, mildew and discoloration typical in normal atmospheric conditions. This warranty does not apply against deterioration of any kind due to abusive use, accidental burns, negligence, vandalism, perforations, natural disasters or acts of nature. Normal wear, weather soiling, or stains from environmental pollution or other sources are not covered.

The product must be properly installed and maintained. The warranty, if applicable, does not cover labor, frames, systems and installation supplied by the dealer.

Infinity Process

The **Recacril®** canvases are treated with a special technological process to ensure the lasting quality of the fabric. In this process, nanoparticles completely cover the surface of the fibers in the fabric, forming a permanent coat. After treatment, both the surface and the inside of the fabric are permanently protected against dirt build-up, and adverse effects of a wide variety of atmospheric agents.

The low reactivity and high stability of the **Infinity Process** endows long-term protection to the awning, especially against mildew, and provides excellent water and oil repellence.

Lisos Flamé / Slub Solids

Una exclusiva colección de 4 tejidos lisos, evocadores de los tonos tierra, piedra y yute proyectan con la presencia de los hilos de estructura flamé el uso de las urdimbres lino. Esta sobria y elegante gama de colores tostados de la colección da a toldos y estructuras exteriores un look elegante y sofisticado a la vez que natural.

This exclusive collection contains four new solids that offer a sophisticated yet natural look through the use of subtle earth tones combined with slub yarns in the weaving process, adding a new dimension of depth and texture to our awning range.

CARACTERÍSTICAS DEL TEJIDO / FABRIC CHARACTERISTICS		
Composición / Composition	100% Fibra acrílica teñida en masa / 100% Solution dyed Acrylic	
Tipo de tejido / Type of textile	Acrílico reversible / Reversible Acrylic	
Acabado / Finish	Tratamiento especial "Infinity" para toldos: repele el agua y la suciedad generando una barrera anti-manchas y anti-moho, permitiendo transpirar a la lona / Special Infinity treatment for Awning applications. Anti-stain, rot-proof water repellent and breathable	BS 7209
Uso / Use	Exterior / Outdoor	
CARACTERÍSTICAS TÉCNICAS / TECHNICAL FEATURES		
Peso / Weight	300 g/m ² ± 5%	UNE-EN 12127
Espesor / Thickness	0,55 mm	UNE-EN ISO 5084
Ancho / Width	120 cm ±1% (estándar / standard)	
	220 / 250 cm ±1% (opcional / optionally)	
Longitud de pieza / Standard Roll Length	60 m	
Columna de agua / Water Column	≥ 300 mm	UNE-EN ISO 20811
Resistencia a la Tracción (Urdimbre / Trama) / Tensile Strength (Warp / Weft)	130/78 daN/5 cm ±5%	UNE-EN ISO 13934-1
Resistencia al Desgarro (Urdimbre / Trama) / Tear Strength (Warp / Weft)	4/3 daN ±5%	UNE-EN ISO 13937-2
Solidez del color a la luz artificial - Xenotest / Colour fastness to artificial light - Xenotest	7-8	UNE-EN ISO 105 B02
Solidez del color a la intemperie artificial - Xenotest / Colour fastness to artificial weathering - Xenotest	4-5	UNE-EN ISO 105 B04
Repelencia al aceite / Oil Reppellency	≥ 5	UNE-EN ISO 14419
Repelencia al agua / Water Repellency	≥ 5	UNE-EN ISO 4920
